

How to make a strong secure password:

Step 1: Use letters, numbers, and a special character (EX: !@#\$%^&\*)

Step 2: Make the password difficult for someone to copy as you type it.

Step 3: Write it down

Step 4: Test the password. If it works leave it alone but keep the paper you wrote down on in a safe place. If the password doesn't work, make sure you type it in correctly.
